

EP-7

* `fs.readFile Sync()` // This will block the main thread.
↳ This is ~~not~~ also sent to libuv, but it is a sync operation.

* `require("node:fs");`
↳ for core node modules we can also write this

* Sync tasks don't have a callback func. coz they don't need to, as they block the main thread.

* Never use Sync functions.

* `setTimeout(() => {
 // ...
}, 0);`

(As soon as callstack is empty)

This will run after whole code is executed.

When the call stack is empty
[when main thread is empty]
